

SpyderOpts

Project: Spyder Opts Software

Duration: 3-4 months

Short Description

A software was developed that would allow the end user to download a complete website and then create keyway or doorway pages that are used to generate traffic. Its low download size enabled even a user with dial-up connection to download the software in no time.

Need

Spyder Opts Inc. provides search engine optimization services. The need of the client was to build a software that would allow the end user to download a complete website and then create keyway or doorway pages that are used to generate traffic.

Challenge

During the development of this software, the key test was in developing the following features:

- Enabling website download in minimum time
- System Memory Management (that would enable even use of computer memory)
- Maintenance of download
- Profiles for multiple site download
- Viewer for viewing files
- Lowest install size

Solution

The end result was SpyderOpts software that allowed the end user to download the website and optimize its pages so that it can get good search engine results.

Technologies Used

- Programming Languages/Tools: Visual Basic
- Platform: Windows Environment
- IDE: Microsoft Visual Studio
- Documentation: MS Visio, Microsoft Word, Microsoft Excel, Microsoft PowerPoint

Benefits

This software allowed the end user to download even a huge website in low time. Its user-friendly interface enabled easy search engine optimization. Low download size enable even a user with dial-up connection download the software instantly.
