

Websiteallies Web Builder

Project: Online Web Building Application

Duration: 2 months

URL: www.websiteallies.com

Short Description

An online web building application was developed that allowed website development through ready templates. It was a simple and easy web publishing process that enabled even the most inexperienced web user to create, edit, and publish a professional website. This web hosting solution provider's website was also redesigned giving it an edgy, clean look.

Need

The client wanted us to build an online web builder application and provide web hosting solutions on the lines of a similar website identified by him. The goal of the client was to provide web templates that would allow the user to build and publish web pages along with the use of a free web hosting service. The website was also required to be redesigned.

Challenges

This web solution involved many intricate features and functionalities. The client approached Netsmartz with several goals that were accomplished successfully with

absolute client satisfaction. Some of the tasks undertaken:

- Website design and development
- Sign Up form development
- Domain search functionality
- Designing Templates for building websites
- Admin section to manage users /domains
- Transaction Management

Solution

The solution was an online web builder application. It has been developed in a way that it provides the user a simple method to edit and publish a professional website. The solution is so powerful that it has allowed the users to create striking websites in hardly any time, using our simple but powerful Web Builder technology. There are many built-in templates from which the user can select.

The users who are experienced in web production can create experienced accounts, allowing them to upload and edit their sites in real-time. The user can sign up for free. There are two options provided to the user. One is for registering sub domains and the other for the user's own domain name. In about 2 months our team delivered the whole project with minimal changes from the client.

Technologies Used

- Programming Languages: ASP, HTML, FLASH, DHTML, JAVASCRIPT, VB
- Platform/OS: Windows 2003 Server
